

BROAD U.S.A. Inc.

BROAD U.S.A. is based in Hackensack New Jersey and is the U.S. arm of the BROAD Group, a global supplier of environmentally sustainable HVAC systems, Air Purification technology, and Fresh Air units. BROAD is also the inventor of B-CORE™, a revolutionary prefabricated hardened stainless steel structural material that improves energy efficiency and enables buildings to be built at a speed 10 x faster than traditional construction.

During the COVID-19 global emergency, BROAD has quickly marshalled its resources and culture of innovation to develop unique solutions in the fight against the Coronavirus:

- Prefabricated Negative Pressure Isolation (NPI) facilities which provide secure treatment environments for treating COVID-19 patients, and apply BROAD's NPI and air purification technology to prevent cross infection and protect medical professionals
- A powered, HEPA filter based respirator: a small Velcro attached case with HEPA filter and 3 speed fan delivers filtered air into the mask with a positive air flow that provides the utmost in safety and comfort.
- Fresh Air systems providing 100% fresh air, and no recycled or returned air. With a unique 3 stage filtration and electrostatic disinfection, workers will be able to return to work and students able to return to school in a secure environment.

The solutions of BROAD are built on innovation and sustainability to save energy, protect our environment, and improve health.
